

## Missouri

Missouri uses a risk-based process to address releases from petroleum storage tanks. Target levels can be found at <http://www.dnr.mo.gov/env/hwp/tanks/docs/soiltypedep.pdf>. Table 3-1 lists default target levels which are used to indicate whether a release to soil or groundwater has occurred. Tables 7-1(a) – 7-12(c) list clean-up levels based on certain site-specific information. In addition, site-specific target levels can be developed for the site using software approved by Missouri DNR. For additional information please refer to the Missouri Risk-Based Corrective Action guidance document, which can be found at <http://www.dnr.mo.gov/env/hwp/tanks/mrbca-pet/mrbca-pet-tanks.htm>. Any questions may be directed to Missouri DNR's Hazardous Waste Program at (800)-361-4827 or via email at [hazwaste@dnr.mo.gov](mailto:hazwaste@dnr.mo.gov).
